Chosen Option : B

**Comprehension:**

Read the given passage and answer the questions that follow.

WHO chief is right in arguing that tracing the origins of Covid is not just a scientific but also a moral imperative. This comes as the US Energy department is reported to have assessed that the pandemic had likely been caused by an unintentional Chinese lab leak. The lab leak theory has persisted despite some scientists positing that the novel virus had naturally jumped from animals to humans. The main reason for this state of unknowability is China's stonewalling of a thorough Covid-origin investigation.

Recall that China had allowed a WHO team to visit the country in early 2021 for the investigation. But the visiting team was neither allowed to freely travel and interview witnesses nor given access to raw patient data from early cases in Wuhan—the Chinese city thought to be ground zero of the pandemic. As a result, the visit's report was inconclusive.

And when WHO proposed a second phase of investigation later that year, China flatly refused. This further fuelled speculation that Beijing was hiding something, especially at the Wuhan Institute of Virology, which was said to be conducting gain of function research on coronaviruses. Experiments that were reportedly also funded by the US. If the lab leak theory is true, Covid would be a man-made disaster of epic proportions.

Therefore, two things are important. First, there must be an international consensus on banning all gain of function research. The dangers of such experiments far outweigh the benefits. These modified viruses are essentially deadly bioweapons. Second, investigations into the origins of Covid must continue—to find the truth and to better prepare for or prevent future outbreaks. Was Beijing directly responsible for the worst pandemic of this century, that's the question.

SubQuestion No : 21

Q.21 What are the doubts of common men about the origin of Covid?

- Ans  A. Covid might have come out of Wuhan lab  
 B. Covid might be created in England lab  
 C. Reddy's lab might be the source for Corona virus  
 D. Covid spread from sea animals
