Question ID : 71939923309

#### Comprehension:

Read the following passage/information carefully and answer the given questions.

In contrast to traditional analysis of minority business, the sociological analysis contends that minority business ownership is a group-level phenomenon, in that it is largely dependent upon social-group resources for its development. Specifically, this analysis indicates that support networks play a critical role in starting and maintaining minority business enterprises by providing owners with a range of assistance, from the informal encouragement of family members and friends to dependable sources of labour and clientele from the owner's ethnic group. Such self-help networks, which encourage and support ethnic minority entrepreneurs, consist of primary institutions, those closest to the individual in shaping his or her behaviour and beliefs. A major function of self-help networks is financial support. Most scholars agree that minority business owners have depended primarily on family funds and ethnic community resources for investment capital. Personal savings have been accumulated, often through frugal living habits that require sacrifices by the entire family and are thus a product of long-term family financial behaviour. Additional loans and gifts from relatives, forthcoming because of group obligation rather than narrow investment calculation, have supplemented personal savings. Individual entrepreneurs do not necessarily rely on their kin because they cannot obtain financial backing from commercial resources.

**SubQuestion No : 16**

**Q.16** According to the passage, traditional analysis of minority business would be least likely to do which of the following?

- Ans**
1. To accumulate personal savings.

2. Examine business primarily in their social contexts.
3. Focus on the maintenance of business rather than means of stating them.
4. Focus on bank loan.
