Comprehension:

Read the following information carefully and answer the given questions.

Climate change and its imperatives across the globe have moved beyond the immediate compulsions of rising mercury levels on planet Earth. It is today a debate among nations on geo-politics and the shift in economic balance from the developed countries to the emerging economies. The rhetoric by global leaders thus needs to be taken with a pinch of salt for it is not all about climate change concerns. The changing axis of economic power to the East and emerging countries of Asia will perhaps take a while to sink in. Developing economies like India are just beginning to take baby steps on the global stage and industry entrepreneurship will have to go a long way. Millions of house-holds in India still have to depend on firewood and kerosene to light up their homes even as scores of Indians die every year for want of basic health amenities.

The priority for such a nation is meeting basic needs, providing food, health and education rather than spending large portions of its GDP on importing technologies to cut emissions, scientists argue. India needs to do its bit, but on its own terms and at its own pace.

SubQuestion No : 16

Q.16 Why does the author want the talks about climate change by the global leaders "to be taken with a pinch of salt"?

Ans ✅ 1. The talks are sometimes directed towards political and economic gains rather than climate change.

❌ 2. The global leaders are not responsible for the climate change.

❌ 3. The talks about the climate change by the global leaders have little to do with developing countries.

❌ 4. The developed countries are more concerned with exporting their technologies that cut emissions.

The changing axis of economic power to the East and emerging countries of Asia will perhaps take a while to sink in. Developing economies like India are just beginning to take baby steps on the global stage and industry entrepreneurship will have to go a long way. Millions of house-holds in India still have to depend on firewood and kerosene to light up their homes even as scores of Indians die every year for want of basic health amenities.

The priority for such a nation is meeting basic needs, providing food, health and education rather than spending large portions of its GDP on importing technologies to cut emissions, scientists argue. India needs to do its bit, but on its own terms and at its own pace.

❌ 2. Develop

✅ 3. Fading

❌ 4. Appear

Comprehension:

Read the following information carefully and answer the given questions.

Climate change and its imperatives across the globe have moved beyond the immediate compulsions of rising mercury levels on planet Earth. It is today a debate among nations on geo-politics and the shift in economic balance from the developed countries to the emerging economies. The rhetoric by global leaders thus needs to be taken with a pinch of salt for it is not all about climate change concerns.
