Question Numbers : (76 to 80)

Read the following passage and answer the questions given after it.

MOSCOW: A Russian actor and a film director rocketed to space on Tuesday on a mission to make the world's first movie in orbit.

Actor Yulia Peresild and director Klim Shipenko blasted off for the International Space Station in a Russian Soyuz spacecraft together with cosmonaut Anton Shkaplerov, a veteran of three space missions. Their Soyuz MS-19 lifted off as scheduled at 1:55 p.m. (08:55 GMT) from the Russian space launch facility in Baikonur, Kazakhstan and successfully reached the designated orbit. Space officials reported that the crew was feeling fine and all spacecraft systems were functioning normally.

Peresild and Shipenko are to film segments of a new movie titled "Challenge," in which a surgeon played by Peresild rushes to the space station to save a crew member who suffers a heart condition. After 12 days on the space outpost, they are set to return to Earth with another Russian cosmonaut.

Speaking at a pre-flight news conference Monday, 37-year-old Peresild acknowledged that it was challenging for her to adapt to the strict discipline and rigorous demands during the training. "It was psychologically, physically and morally hard," she said. "But I think that once we achieve the goal, all that will seem not so difficult and we will remember it with a smile."

Shipenko, 38, who has made several commercially successful movies, also described their fast-track, four-month preparation for the flight as tough.

"Of course, we couldn't make many things at the first try, and sometimes even at a third attempt, but it's normal," he said.

Dmitry Rogozin, head of the Russian state space corporation, Roscosmos, was a key force behind the project, describing it as a chance to burnish the nation's space glory and rejecting criticism

from some Russian media.

Some commentators argued that the film project would distract the Russian crew and could be awkward to film on the Russian segment of the International Space Station, which is considerably less spacious compared to the U.S. segment. A new Russian lab module, the Nauka, was added in July, but it is yet to be fully integrated into the station.

Once they arrive at the space station just over three hours after the launch, the three newcomers will join Thomas Pesquet of the European Space Agency, NASA astronauts Mark VandeHei, Shane Kimbrough and Megan McArthur, Roscosmos cosmonauts Oleg Novitskiy and Pyotr Dubrov and Aki Hoshide of the Japan Aerospace Exploration Agency.

Novitskiy, who is set to star as the ailing cosmonaut in the film, will take the captain's seat in a Soyuz capsule to take the crew back to Earth on Oct. 17.
