Comprehension:

Read the following passage and answer the questions based on it.

Movies Now IS NO.1 ENGLISH MOVIE CHANNEL

Mumbai: Movies Now, launched by the Times Television Network in December 2010 to give the urban audience an experience of superlative quality viewing of Hollywood movies in High definition(HD), continues to hold the no.1 position in the English movie channel category.

The HD experience, introduced by Movies Now, has redefined the way viewers watch English movies in India, making it the preferred English movie channel. The channel has been successful in dethroning decade old established players like Star Movies and HBO by holding the position at the top of the charts for 26 weeks now.

The channel has not only created waves with its unique proposition, but transformed the entire category, with an exponential increase in reach and a phenomenal increase in the time spent per viewer for the category.

The time spent by viewers in the category has gone up from an average of 43 minutes to 55 minutes, according to TAM. Movies Now leads in viewership in 22 out of the 26 weeks since its inception.

Comprehension:

Read the following passage and answer the question based on it.

PETROLEUM

Petroleum is a fossil fuel because it was formed from the remains of tiny sea plants and animals that died millions of years ago. When the plants and animals died, they sank to the bottom of the oceans. Here, they were buried under thousands of feet of sand and silt. Over time, this organic mixture was subjected to enormous pressure and heat as the layers increased. The mixture changed, breaking down into compounds made of hydrogen and carbon atoms — hydrocarbons. Finally, an oil-saturated rock — much like a wet household sponge — was formed.

All organic material does not turn into oil. Certain geological conditions must exist within the oil-rich rocks. There must be a trap of non-porous rock that prevents the oil from seeping out and a seal (such as salt or clay) that keeps the oil from rising to the surface. Under these conditions, only two per cent of the organic material is transformed into oil.

A typical petroleum reservoir is mostly sandstone or limestone in which oil is trapped. The oil in it may be as thin as gasoline or as thick as tar.

Petroleum is called a non-renewable energy source because it takes millions of years to form. We cannot make new petroleum reserves for our use.

SubQuestion No : 25

Q.25 Which of the following is not essential for the formation of oil?

- Ans ☒ 1. Pressure and heat
☒ 2. Remains of plants and animals
☒ 3. Trap of non-porous rock and seal
☒ 4. Salt water
