Comprehension:

Read the passage and answer the question that follows.
Staying healthy is at the top of nearly everyone's priority list, and our daily choices can determine just how healthy we are. Not everything is in our control, but the habits and approaches we take to our health can often make a difference between being healthy and unhealthy. Two areas we have the most control over are our diet and exercise. These can both have huge effects on overall health, and can be some of the main factors in preventing disease and other complications later in life. Preventive healthcare measures like proper diet and exercise can also help your budget. In general, you should be aiming for at least two-and-a-half hours of medium-intensity exercise per week, or a slightly lower amount of high-intensity exercise. Mixing aerobics in with things like weight training or sports is a great way to vary your workouts. Make sure to stretch before and after exercising, and take appropriate safety precautions. Dietary needs differ for every person, but in general, some of the best foods you should regularly eat include: fruits and vegetables, protein, whole grains, nuts and legumes. Try to balance items like dairy and oils, along with meats and poultry. Try to avoid sweets, overly salty foods, trans fat-heavy foods, and overuse of alcohol. Pay attention to calorie count—your needed amount will vary based on your size, age, and gender.

Read the passage and answer the question that follows.
From encouraging schoolwork and sports to modelling values as a child grows (remember, they do as you do, not as you say!), parents exert enormous influence over their children's lives. They are, however, not the only on-the-ground influencers—especially after children enter school and begin interacting with the world at large. Most parents work to give children the best start possible, but it's also important for parents to recognise that kids come into the world with their own temperaments, personalities, and goals. While parents may want to push their child down a certain path, a parent's job is to provide an interface with the world that ultimately prepares a child for complete independence and the ability to pursue whatever path they choose. In a rapidly changing world, parenting can be subject to fads and changing styles, and parenting in some privileged circles has become a competitive sport. But the needs of child development as delineated by science remain relatively stable: safety, structure, support, and love. To parent effectively, it's not enough to simply avoid the obvious dangers like abuse, neglect, or overindulgence. Indeed, The National Academy of Sciences delineates four major responsibilities for parents: maintaining children's health and safety, promoting their emotional well-being, instilling social skills, and preparing children intellectually.

Q.7 Below are given two sets of numbers. In each set of numbers, a certain mathematical operation on the first number results in the second number. Similarly, certain mathematical operation on the second number results in the third number and so on. Which of the given operations follows the same set of operations as in question? (NOTE – A two/three-digit number cannot be broken into individual digits for operations e.g. if 37 is followed by 10, the operation cannot be $3+7$ as a two-digit number cannot be broken into individual digits)
