Originally, only the Hindu priests practiced the art of yoga, but later, even common people started practicing it for its health benefits. Yoga is an ancient art that connects the mind and body. Yoga is a valuable gift of ancient Indian tradition. It embodies unity of mind and body, thought and action, restraint and fulfilment, harmony between man and nature and holistic approach to health and well-being. It also helps relieve mental stress, and improves the immune system. Yoga is not about exercise but to discover the sense of oneness with ourselves, the world and nature. By changing our lifestyle and creating consciousness, it can help us to deal with climate change. It includes various postures and breathing exercises. It ensures that the body functions properly. Regular practice of yoga not only makes your immune system strong but also provides great energy to the body.

Question ID : 63068072167

Comprehension:

Read the following passage carefully and answer the given questions.

Renewable energy resources are being used all over the world. Brilliant minds have devoted their lives to finding resources that do not leak greenhouse gases into the ozone layer and which do not cost large amount of money. They include energy like Hydro energy, solar energy, wind energy, geothermal energy and ocean resources, and energy generated from biomass and biofuels which are viable alternative sources of energy. They are clean sources of energy and have lower carbon emissions compared to conventional sources of energy such as fossil fuels. What's more, the energy generated is nearly 80% renewable.

Harnessing the power of moving water to generate electricity, known as hydroelectric power, is the largest source of emission-free, renewable electricity worldwide and has been used over the ages. Solar power is another excellent energy resource. The sun gives us free rays, so why not use them as a power source? Solar power is trapped by special rows of panels which take in the energy of the sun and provide power for homes. In places which are windy, powerful wind turbines have been constructed to provide energy. The turbines are big towers with three prongs which are pushed around by the wind. This produces energy. The largest 'wind farm' in the world is in Denmark.
