A	B
a) Written	1. Cinema
b) Visual	2. Lecture
c) Verbal Communication	3. Emotions
d) Non- verbal	4. Signal Lights
e) Audio- Visual	5. Mail

PART-C

15. Read the following passage and answer the questions set on it:

Ants talk - not with words but with tastes and smells ! Their vocabulary is made up of a mixture of substances they produce in various parts of their bodies and emit via their glands. The substances, known as pheromones , are signals that other ants can smell and taste. The messages they communicate set off a specific kind of behaviour : fetching food for instance or looking after the brood or feeding the queen. Ants use a hundred different scents to communicate a hundred different messages. With such a sophisticated array of messenger fragrances, ants organize complicated tasks with close-to perfect efficiency.

When you see a handful of ants scurrying around in the kitchen, without any apparent purpose, it does not mean they have lost their bearings. They are scouts foraging for food. Once they have found something edible, they report back to the base, depositing their chemical spores on the way. " Food located, please collect, " is the taste and smell message for the other members back at the nest. Soon , long chains of worker ants begin scurrying back and forth from their nest ferrying food which they hand over to ants who specialize in housekeeping. The duties of these ants include keeping the nest in good order and cleaning and feeding the queen.

Jet ants settle in hollow trees where they build papery structures to live in. In these trees they keep herds of greenflies which they actually milk in the same way we milk cows. It is a model partnership. To satisfy their need for amino acids, the greenflies have to ingest large quantities of sap. As a result, surplus sugar forms in their bodies which they excrete through their rear ends. This so-called honey dew is the jet ants' main source of nourishment. In return, the ants see to it that the green flies do not get stuck fast in their own honey and also protect their herds from marauding predators like lady birds. In fact it is a form of dairy farming. Dairying is only one of the many ingenious ideas ants have come up with in the course of evolution. Small red wood ants, for example, regulate the temperature in their high rise ant hills by sunbathing on warm spring days and then scuttling back to the nest double quick to give off the warmth they have soaked up.

An ant colony, is an almost perfectly organized network of ants complementing one another in all they do. Ants will do anything as long as it is in the service of the common good. Perhaps socialism does work after all under certain circumstances.

A. Answer the following in a word, a phrase or a sentence as required: 1X4=4

- I. How do ants communicate?
- II. Where do you find jet ants?
- III. What is the main source of nourishments for jet ants?
- IV. The substance emitted by ants to send messages is called_____

B. Answer the following Questions: 2X3=6

- I. How do red wood ants regulate the temperatures in their ant hills?
- II. What are the different kinds of messages that ants transmit?
- III. How do the ants help the greenflies?

C. Give the meaning of the following words as used in the passage: 1X4=4

- I. Scurry
- II. Forage
- III. Ingest
- IV. Ingenious

D. Briefly describe how ants co-exist and work for their common good. 6X1=6

E. Match the words in column "A" with the meaning in column "B"**1X5=5**

A	B
a) Array	1. Family
b) Apparent	2. Transport
c) Ferry	3. Assemblage
d) Brood	4. Secreting Organ
e) Glands	5. Evident

16. Write an essay in about 300 words on any one of the following topics:**25 Marks**

- a) Has English language created a divide in our society?
- b) Should capital punishment be abolished or not?
- c) Are smart phones killing the pleasures of reading in students?
- d) Menace of terrorism.

17. Write a precis of the passage given below in about 80 to 85 words and suggest a suitable title.**25 Marks**

There is an enemy beneath our feet - an enemy more deadly for his complete impartiality. He recognizes no national boundaries or political parties. Everyone in the world is threatened by him. The enemy is the earth itself. When an earthquake strikes, the world trembles. The power of a quake is greater than anything man himself can produce. But today scientists are directing a great deal of their effort into finding some way of combating earthquakes. An earthquake strikes without any warning. When it does, its power is immense. Gas mains burst, explosions are caused and fires erupt. Underground railways are wrecked. Buildings collapse, bridges fall, dams burst, gaping crevices appear in busy streets. If the quake strikes at sea, huge tidal waves sweep inland. If it strikes in mountain regions, avalanches roar down into the valley. In 1968 an earthquake struck Alaska. It is likely that this was one of the most powerful quakes ever to have hit the world. Geologists estimate that during the tremors, the whole of the state moved over 80 feet farther west into the Pacific Ocean. Imagine the power of something that can move an entire subcontinent! This is the problem that the scientists face. They are dealing with forces so immense that man cannot hope to resist them. All that can be done is to try to pinpoint just where the earthquake will strike and work from there. At least some precautionary measures can then be taken to save lives and some of the property.

(252 Words)

Precis should not exceed 80 to 85 words.
